A tree was blown down onto a road in Stanford.				
MCLEAN COUNTY --- 0.7 N YUTON [40.54, -89.07]				
	11/11/15 20:35 CST		15K	Thunderstorm Wind (EG 52 kt)
	11/11/15 20:40 CST		0	Source: Emergency Manager
A semi was blown over on I-74 at mile marker 125.				
A deepening area of low pressure tracking from Colorado into the western Great Lakes pulled a strong cold front into central Illinois during the evening of November 11th. Thanks to an unseasonably warm and moist airmass that had been pulled northward ahead of the system, a line of strong to severe thunderstorms developed along the front. Many of the storms produced 60-70mph wind gusts and localized wind damage, especially along and north of a Rushville to Bloomington line.

Storm Data and Unusual Weather Phenomena - November 2015

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

Low pressure tracked from near Kansas City during the evening of November 20th into the Ohio River Valley by the morning of November 21st. Since the atmosphere was initially warm, the precipitation started as rain across much of the area, then gradually changed to snow during the morning of the 21st as colder air arrived in the wake of the storm system. The highest accumulations occurred where rain changed to snow fastest, generally along and north of the I-74 corridor. 4 to 6 inches of snow fell along a Peoria to Watseka line...and as much as 8 to 10 inches accumulated along and northwest of a Galesburg to Bradford line.
